ILSCO CONNECTORS FOR THE SOLAR INDUSTRY

Today, capturing the sun's energy for conversion to electricity is at the forefront in our industry. ILSCO has become an industry leader as a component manufacturer which supplies grounding, bonding

and connectivity solutions to the solar industry. ILSCO also has the ability to design and build custom products, if you don't find a connector solution within our standard offering.

WIRE MANAGEMENT

Wire management clips are designed to clip onto a thin metal edge to provide a means to hold cables or wires in place. ILSCO offers nylon clips, with and without cable ties, as well as stainless steel clips. These clips have become a common accessory for solar panel projects where they are used to hold up ground and power wires that are daisy chained from panel to panel.

CUSTOM DESIGN CAPABILITIES

If a standard ILSCO product just won't do, we can custom design build from specifications provided by a customer. Custom aluminum extrusions are called "custom" for a reason: each customer has unique requirements. Our objective is to effectively manufacture to those requirements each and every time. An example of a custom built power distribution block and custom assembly from standard product are showcased below.

More than a connector company,
ILSCO is a connections company.
CONNECTIONS MATTER.
